

Ali Saboohi . Jarvis Consulting

Hi, I'm a recent graduate from Ryerson university with a bachelor's degree in Computer Science. During my four years at Ryerson my main focus was on backend development, machine learning and computer vision where I worked on many projects such as Face Detection application using HOG features, Handwrite Recognition application and created a few websites. Currently, I am a Software and Data Engineer at Jarvis where I am trained to master the tools and frameworks necessary for professional work enviroment such as Git, Docker, Java, Spring boot, RDBMS, Maven etc. In addition to this, I have a passion for the insights data can provide. My experiences taught me how to come up with creative solutions to the real-world problems and I am looking forward to bring my experiences and skills to your team.

Skills

Proficient: Java, Linux/Bash, RDBMS/SQL, Agile/Scrum, Git

Competent: Docker, Maven, REST API, JDBC, Spring Boot

Familiar: Matlab, Python, ReactJS, MongoDB, Node.js

Jarvis Projects

Project source code: https://github.com/jarviscanada/jarvis_data_eng_AliSaboohi

Cluster Monitor [GitHub]: The Objective of this project was to design an MVP in order to gather hardware specifications and resource usage of each node in a Linux cluster. In Jarvis, the Linux cluster administration team manages a Linux cluster of ten nodes running Centos7. These nodes are internally connected through a switch and able to communicate through internal IPv4 addresses. The administration team has requested a bash agent program that is installed on each node and gathers the requested data. The collected data is inserted into a Postgres database instance which is pulled from Docker Hub. Moreover, the LCA team will use the data to generate reports for future resource planning purposes. In order to make decision making easier, a queries file has been created for the administration team to see what nodes have the highest memory and number of CPUs, what is their usage over a five minute interval and detecting failures.

Core Java Apps [GitHub]:

- Twitter App:
- JDBC App:
- Grep App:

Highlighted Projects

Clothing Store Web Application: Designed and Developed Online clothing Web site with Online Shopping facility. using Java and Spring Boot for backend and React Js for Frontend. Frontend developed as SPA application in order to use Client Computer Resources using JavaScript ES6 Version, Vanilla JavaScript, Babel, React-Dom-route, Redux, HTML and CSS, in Backend using Spring Core for dependency Injection and AOP, Spring MVC to develop Rest Endpoints (RestController Bean) and JSON. implementing Data Entity Classes and using Hibernate, Spring Data JPA, JPA QL for managing Data and store it in MySQL Database

Professional Experiences

Software Developer, Jarvis (2020-present): aaa aa a aaa aa aa hh hh hhhh hhh hh hh h hh hhh hh hh h hh h hhj j
